

Gunnebo SafeCoin D 700

Wall-mounted self-service coin roll dispenser for banks and retail

The SafeCoin D family of machines sets a new standard for coin roll dispensers. SafeCoin D 700 is a compact selfservice solution with colour screen and softkeys for around-the-clock dispensing of coin rolls.

The machine accepts banknotes and coins and exchanges them for coin rolls, coins or notes of another denomination. It can store between 200-525 coin rolls per module and between 1000-2000 coins per hopper. In order to meet the demands that 24-hour-a-day service requires, SafeCoin D 700 is built using only the latest and most reliable components.

Configuration of the terminal is flexible to allow clients to choose a machine which suits their own particular

requirements. The client can select the required functions and components from the configuration options available.

Design

Depending on requirements, SafeCoin D 700 can be installed as a through-the-wall or in-the-wall unit. The machine can be accessed from the rear, making it easy for staff or CIT companies to empty or fill and for technicians to service.

To make each transaction quick and simple for the end user, a colour screen and softkeys guides the customer through the process.

Remote Monitoring

SafeCoin software can be connected to the most common monitoring platforms and provides real-time monitoring, transaction control, device status overview and retrieval of statistical data.

Automated emails triggered by freely configurable events are also possible.

With the local area network as a standard, the machine is equipped with an integrated web-server based monitoring system.

Exchange Options

- Banknotes to coin rolls
- Banknotes to coins
- Coins to coins
- Banknote to banknotes (smaller denominations)

Capacity

Coin rolls (a double roll dispenser has two modules)

per module (depending on value)	e.g. 2 EUR e.g. 0.10 EUR roll	200 coin rolls 350 coin rolls
individual coins per coin hopper (depending on value)	e.g. 2 EUR e.g. 0.10 EUR	1000 coins 2000 coins

Technical Data

Positioning: Wall-mounted (TTW, ITW)

Placement: Indoor

Servicing: Rear-loading

Supply voltage: AC 230 V $\pm 10\%$

Mains frequency: 50Hz

Power consumption: 100 VA standby/200 VA transaction

Dimensions (WxHxD in mm): 700 x 1750 x 1015

Service area behind the machine

(WxD in mm): 1500 x 1200

Weight (empty/full): 480/1160kg

Material: 3mm steel housing and door

Ambient temperature: +5 °C to +45 °C

Relative humidity: 20 % to 80 % (non-condensing)

Paint colour: Special RAL 9006 and 9007 powder coating. Other RAL colours on request.

Advantages to the end user

Time savings

- Self-service machine
- Shorter waiting times

Service features

- Customer identification by means of a card reader (user option)
- Several services in one device: rolls, coins, banknotes
- Various fee models available

Availability

- Around-the-clock availability

Advantages to the owner

Design

- 24/7 self-service
- High-capacity coin roll dispensing modules
- High degree of operational reliability
- Four functions in one machine

Modern technology

- Control of individual components using CAN bus technology
- Windows 10 operating system
- Electronic log
- Connection to the owners's network
- Monitoring
